

Healthy Farms Natural Solutions give you a safe, all-natural three-prong solution that helps you reach maximum yield potential – all year round.

Composting optimizer for both corn and soybeans.

Breaks down organic material after harvest for richer soil start to next year.

Easy application to treat seeds.

Promotes equality and uniformity in plant growth for maximum yield.

Microbial soil enhancer and starter fertilizer.

Treats soil or plants anytime during season.

Way

Eradicator-F

The day after harvest is the first day of the next crop's growth stage.

For uniform, simultaneous emergence next spring, start the season off right in the fall with Eradicator-F. Eradicator-F is a special preparation of environmentally friendly microbes and fluvic acid. It helps field residue decompose faster and conditions the soil for the most effective use of Promote MSE and RowBust. Use Eradicator-F in the fall or early spring, and till just ahead of planting.

Ensures uniform planting.

Increases enzyme activity.

Stimulates plant metabolism.

Increases enzyme activity.

Speeds up decay of organic obstructions such as root balls and stalks, field stubble and thatch.

Conditions the soil for the most effective use of Promote and RowBust during the growing

Promote MSE

A seed treatment whose name says it all.

Promote the yield potential of every plant by simply spraying on the seed the day of planting. The complex, 21-strain mixture of all-natural microbes in Promote MSE seizes nitrogen from the ground and air and unlocks nutrients like phosphorus, potassium and other minerals that are already in your fields. That level of nutritional assistance equalizes plant-growth key to maximum crop yield.

Spray on seed right before you plant.

Brings all plants up to full capacity.

Equalizes growing for better yields.

RowBust MSE

A microbial soil enhancer and starter fertilizer.

Use RowBust to help each plant continue getting optimum nutrition for equal plant growth throughout the growing season. RowBust is a group of beneficial, all-natural microorganisms that helps the plant reach nutrients tied up in the soil. The fluvic acid in RowBust stimulates plant metabolism, increases enzyme activity and plays an important part in efficient respiration.

Encourages better seed to soil contact.

Achieves a more even stand establishment.

Reduces stress from herbicide application.

Improves fungicide performance.

Mix with fungicide / insecticide foliar application.

Use the healthy benefits of nature to get the most out of your acres. Healthy Farms offers the natural solutions of many biological components to ensure each seed you plant can grow to its maximum potential.
